

Crisp, blue-white illumination

Vision 50™ creates a vibrant stimulating environment, where whites look brighter. This 5000 Kelvin, 90 CRI lamp improves contrast for visual tasks. Colours appear true to life, people look natural and visual clarity is improved which will boost performance. With combined desirable blue-white light and superior colour rendition, these "north sky light" lamps reproduce colour accurately for better "see-ability", just like the arctic sky. Also used for more vibrant merchandising displays. Vision 50™ aid in colour matching, distinguishing details and seeing clearly. They are low mercury so environmentally friendly. The whitest lamp colour offered.
